(54) Title: METHOD, SYSTEM AND A MOBILE COMMUNICATION STATION ADAPTED FOR SELECTION OF AN AC-
CESS NETWORK(57) Abstract: In a method of selecting an access network from among one or more access net-
works capable of providing service to a mobile communication station, a radio quality from the
terminal to each access network is determined (S1), for each access network, a utilization factor for
at least one node is determining (S2), for each access network, a user perceived data quality, based
on said determined utilization factor and said determined radio quality for the access network, is
determined (S3), and at least one of said access networks, is selected (S4) based on the determined
user perceived quality, whereby an improved user perceived data quality is enabled.
